## Windows Server/SQL Server Migration

### Proge-Software Has Earned the Windows Server and SQL Server Migration to Microsoft Azure Advanced Specialization

**[Rome] – [12th of May 2021] – Proge-Software [www.progesoftware.it] today announced it has earned the Windows Server and SQL Server Migration to Microsoft Azure advanced specialization, a validation of a solution partner’s deep knowledge, extensive experience and expertise in migrating Windows Server and SQL Server-based workloads to Azure.**

Only partners that meet stringent criteria around customer success and staff skilling, as well as pass a third-party audit of their migration practices, are able to earn the Windows Server and SQL Server Migration to Azure advanced specialization.

As companies look to modernize their applications and take full advantage of the benefits that cloud computing can deliver, and with the recent end-of-support for Windows Server 2008 R2 and SQL Server 2008 R2, they are looking for a partner with advanced skills to assess, plan, and migrate their existing workloads to the cloud.

Matteo Sposito, Account Manager at Proge-Software: “The Windows Server and SQL Server Migration to Microsoft Azure advanced specialization demonstrates our skills, competencies and quality in migrating and optimizing SQL workloads on Azure. Many thanks to our customers who continue to make us proud for their satisfaction”

Rodney Clark, Corporate Vice President, Global Partner Solutions, Channel Sales and Channel Chief at Microsoft added, “The Windows Server and SQL Server Migration to Microsoft Azure advanced specialization highlights the partners who can be viewed as most capable when it comes to migrating Windows-based workloads over to Azure. Proge-Software clearly demonstrated that they have both the skills and the experience to offer clients a path to successful migration so that they can start enjoying the benefits of being in the cloud.”
